

WIRELESS CAMERA/ MICROPHONE DETECTOR

Specially made for detecting wireless spy cameras and body bug, **without interference by cellular phones**. Applied with fuzzy scanning technology and digital signal filter, this device will reduce most of the false alarm caused by the cellular phones around. This device avoids being peeping to protect privacy or protect information from being disclosed secretly.

Special Features:

- Vibration detection, silent detecting, earphone detecting
- It has display light which indicate strong or weak signals
- Broad detecting range (1MHz to 6,000MHz), no leak and miss
- Can play down or adjust high detecting sensitivity (locates pinhole camera as long as the detecting range is dwindled and sensitivity is played down)
- No-voice vibration induction, detects secretly in any special locations
- Signal of the RF bug detector is different from pinhole camera's, easy to differentiate signals
- Detected distance for regular 2.4GHz up to 20 feet
- Frequency: 1MHz to 6.0GHz
- Work voltage: 3V
- Waite : 125g
- Work current:
 - Alert: 8mA
 - Vibration: 70mA

Applications:

1. Bank's ATM prevents spy camera.
2. Restaurants, cinemas, theaters, concerts, museums or art galleries that prevent video body bugs.
3. Military or government premises where camera recording is forbidden.
4. Offices, factory or any commercial premises that would like to remove RF disturbance.
5. Detect peeping camera in shopping mall, school, locker room clubhouse, hotel etc.
