

Pinhole -- wall socket DVR Camera

The world's smallest pinhole camera is built in a disguised room socket. Its hard to distinguish the disguised one from real one. Its so covert that stranger breaks into will never notice his every action is under surveillance. Remove socket cover fixed by magnet, pinhole camera, switch, SD card slot and USB interface are all exposed into your eyes. Turn the switch to on mode, LED light goes on blue and keeps 2 seconds, indicating device enters into standby mode. Video recording is controlled by sound induction. It's really a good choice for home & office security and surveillance.

Key Specifications/Special Features:
